

Cytomine main documentation

Welcome to the Cytomine main documentation.

It is recommended to start by reading the main [Cytomine overview page](#) for a short introduction on Cytomine main concepts.

Then the documentation is organized in four main sections below for administrators/operators, developers, data/computer scientists, and end-users.

For testing the Cytomine platform, you can either:

1. Install a Cytomine instance on your own computer (laptop/desktop), on a server at our own site (intranet-only or worldwide internet access), on in the cloud, or
2. Access our demo instance available here: <http://demo.cytomine.be/> (see [Cytomine User Guide](#) for usernames/passwords or request a personal account).
3. [Contact us](#) for hosting/installation options.

Operations

Documentation for **administrators/operators**:

- [How to install the Cytomine software](#)

Developments

Documentation for **software developers**:

- [How to install a Cytomine development environment](#)
- [Global architecture: Implementation overview & paradigms](#)
- [Data model: main packages](#)
- [Extension: How to extend Cytomine core, development guidelines & tools](#)

Data & algorithms

Documentation for **data /computer scientists**:

- [Data access and interoperability \(RESTful API\): How to import/export data](#)
- [How to install the Cytomine Client and Data Mining Package](#)
- [Available algorithms for image retrieval, segmentation, classification, ...](#)
- [Extension: How to add and execute new software/script /algorithms](#)

Contact us:

E-mail: info@cytomine.org

Users

Documentation for **end users (biologists,...)**:

- Cytomine User interface guide
- Scientific papers using Cytomine

Github: <https://github.com/cytomine> (Official version) and <https://github.com/cytomine-uliege/> (ULiège research latest developments)
